GAZ COILOVER SHOCK ABSORBERS	13-14
FITTING, USAGE INFORMATION & WARRANTY	15

GAZ GT

A very extensive range of telescopic dampers for both modern and classic car applications. These units can be built in various open and closed lengths and will adjust bump and rebound off a single control knob.

GAZ GAI

A range of top adjustable inserts that alter rebound only but are available with various bump rates for road or competition cars manufactured from the 1960's onwards.

GAZ DA

Our flagship range of independent bump and rebound adjustable coilover units designed for motor sport use. These units have an all aluminium body and end fittings to take bearings or metalastic bushes. These units have a 16mm piston rod and are fitted with a progressive rate closed cell bump stop. These units can be installed from vertical to horizontal as there is a gas cell fitted in the outer reservoir. Gaz offers a total rebuild and revalve service to back up this high quality product.

GAZ GS

This is a fixed spring seat unit to take standard diameter coil springs with the added benefit of adjustable damping from a single control knob. These units are manufactured mainly for the classic car market to retain original equipment ride height but lengths can be adjusted to customers requirements if the car is to be lowered or raised for competition use.

GAZ GOLD PRO

Gaz gold pro kits are a premium range of suspension units designed for fast road, track day and tarmac motorsport use. They are manufactured from high tensile alloy with induction hardened piston rods and have a multi point adjustable control knob to adjust bump and rebound. These units are filled with high viscosity index fluid to alleviate cavitation and have an internal gas cell to help prevent fade, added to this the Gaz Gold Pro range are offered with self lubricating spherical bearings and progressive bump stops.

GAZ GP

A vast range of height and damping adjustable units for road and competition use. These units are available in two diameters 1.3/4" o.d. mainly to take 1.9" i.d. coils. These units have a 12mm piston rod and a gas cell fitted in the outer reservoir. The 2" body units are available with 12-14 or 16mm rods and a wide range of spring seat sizes. These are also fitted with a gas cell to prevent cavitation and resist fade. All units are available with bearings, bonded or polyurethane bushes.

GAZ 40MM MONOTUBE SUSPENSION INSERT

Gaz have just released a 40mm inverted mono tube insert, which features a high quality hard chrome plated outer cylinder that is fitted with a 14mm induction hardened piston rod. The unit is charged with nitrogen and a high viscosity fluid that is separated by a floating piston for constant damping under extreme conditions. They are available in various lengths for rally, trackday and race to take roller bearing mounts. Please call for prices.

GAZ CLASSIC REBUILD SERVICE

Please contact us for information

GAZ GHA KITS

Gaz height adjustable kits are primarily made for the modified road car market. The main features of these kits are:

1. On car damping adjustment
2. Shortened body and stroke lengths to allow a -25 to -65mm ride height adjustment
3. The units have a coarse acme form thread for ease of adjustment and to minimise corrosion the unit is zinc plated.
4. All units are provided with high quality coil springs in various rates and diameters. Spring rates can be altered on request to suit customers requirements.
5. When a coilover is unable to be installed a separate damper and rear coil spring with a variable spring platform is used so the kit retains full height adjustment.

N.B. These kits can obtain much lower ride heights for show purposes only but the vehicle should not be driven at these levels as the steering and drive shaft joints can lock out.

GAZ GOLD

Gaz Gold height adjustable kits are a premium range of suspension units designed for tarmac motorsport and the serious track day enthusiast. Most of the GHA Listings are available in the Gold range with the addition of strut kits for the classic and retro car market i.e. Lotus, Cortinas, Escort, Mexicos, Capris, Lancia Intergrale and Evo's.

The features are:-

1. Front and rear units adjust bump and rebound from a single control knob on the side of the unit.
2. Struts and semi struts have 62mm bodies for increased oil capacity. These units are fitted with 22mm diameter induction hardened piston rods that are hard chrome plated for strength and durability.
3. All units have multi lip sealing. The outer seal is a metal encased wiper to clean the piston rod. This in turn extends main seal performance and oil retention under extreme conditions.
4. All the Gold range are fitted with a gas cell in the outer reservoir and filled with a high viscosity index multi grade oil to prevent cavitation and reduce fade in motor racing conditions.
5. The coilovers and telescopic units in this range utilise lightweight billet alloy components where possible, i.e. bases, end fittings, seats, lockrings, rod guides and gland nuts. The outer tube is steel with a nickel coating to provide the best anti corrosive finish possible. All outer alloy components are anodised.
6. A full range of springs are stocked at the factory for road and motorsport use.

GAZ MONOTUBE

A new quality damper to satisfy the needs of the discerning competition and track day enthusiasts. Built from high tensile alloy to withstand the high stresses that are involved in race conditions.

The damper body is hard anodised to give maximum protection against wear during use. Bump and rebound are on the car adjustable by a single adjuster on the rod and the unit is charged with an inert gas via an internal floating piston.

PTFE lined sperical bearings are used for the end fittings to give a smooth quiet mounting of the unit.

Please call us for prices, you will be surprised at how competitive they are.

All units in our ranges can be purchased individually or repaired by return in the event of an accident.

ADDITIONAL NOTES

1. Original equipment donor units are required.
2. Original equipment front struts are required for rebuild to height adjustable front struts.
3. Telescopic rears not coilovers, rear height adjustment achieved by lowered springs only (supplied).
4. Telescopic rears not coilovers, rear height adjustment possible using original equipment torsion bars. Specialist knowledge required.
5. Original Equipment configuraion is a separate spring/damper installation. GHA and GGA provide a coilover damper which requires the installation of a rear strut brace.
6. Full rear conversation kit available. Vehicle rear turrets require professional installation.
7. Telescopic rears not coilovers, rear height adjustment achieved by lowered springs and GAZ adjustable spring pans (supplied).
8. Front height adjustment is achieved by using a supplied threaded external tube and 65mm id coil springs fitted to original struts.
9. Kits are also available with Roller bearing top mounts, shortened damper bodies etc. Phone for details of specification and price.

GAZ COILOVER SHOCK ABSORBERS

www.vicspiteri.com.au

VEHICLE MODEL	OPEN LENGTH	CLOSED LENGTH	STROKE	RRP	GGA GOLD RRP
All open and closed dimensions are metal to metal and units are fitted with a 1" bumpstop. This therefore increases the closed length and reduces the stroke length by 1". All units are fully dyno tested before despatch.

General information regarding the fitment of shock absorbers, suspension struts and lowering kits.

Replacing shock absorbers on any vehicle requires mechanical automotive experience. Under no circumstances should any tool be used to grip the piston rod. This will inevitably produce damage to the smooth surface of the piston rod and torn chamber seals, resulting in fluid loss and an unserviceable unit. Please take time to examine other suspension components during fitment and renew any worn items with suitable replacements.

Suitability

Be sure to check that the parts you are supplied are suitable for the vehicle for which they are intended. We cannot replace any items that have been correctly supplied to the information that we have been given after they have been fitted.

Springs

Please ensure that springs are fitted correctly and not inverted. If you are unable to determine the correct fitting position for your vehicle please refer to your workshop manual or seek guidance from a qualified person.

Brake bias adjustment

Some vehicles that are fitted with a brake bias system may require resetting or adjustment after installation of your new shock absorbers and springs.

Mechanical ABS sensor adjustment

Some vehicles that are fitted with mechanical ABS sensors may require resetting or adjustment after installation of your new shock absorbers and springs.

Steering geometry

Unless Gaz Shocks specify alternative measurements, please use the settings detailed by the manufacturer of the vehicle.

Lowering measurements

The reduction in ride height quoted in our catalogue is approximate and can be affected by many factors that are outside the control of Gaz Shocks. Please ensure that your car has not been subject to any other conversion that may continue to influence its ride height after installation and impair the performance of our product.

N.B With some Mercedes models, worn spacers between the coil spring and spring pan may result in excessive lowering. Replacement spacers are readily available from Mercedes Benz spares stockists and should effectively remedy this problem.

Problems associated with excessive lowering

Gaz Shocks recommend that no vehicle is lowered more than 60mm. We will not accept any claim for damage or excessive wear to any component or area of a vehicle however caused.

Vehicles that have had their ride height reduced in excess of 40mm often benefit from having their steering geometry reset to the data detailed by the manufacturer of the vehicle to promote even tyre wear. In some extreme cases even this course of action will not remedy the situation and Gaz Shocks cannot be held responsible for any excessive tyre wear however caused.

After market wheels & tyres

Please ensure that the wheels and tyres fitted to the vehicle will allow enough clearance from the bodywork after installation of the lowering kit. Gaz Shocks are not responsible for any damage to tyres or bodywork caused by friction during contact.

Gaz Shocks warranty

Your Gaz Shock is covered by a two year warranty, effective from the date that the shock was purchased. In the unlikely event of a claim under the warranty, the Company will require evidence of purchase. It is a requirement of the Gaz warranty agreement that any faulty unit must be returned to the dealer from whom it was purchased. The dealer will then forward it to the Gaz Quality Department who will assess any relevant claim. The Company will, at its discretion, repair or replace shocks which are part of a valid claim. This warranty will not be valid if there is evidence of incorrect installation or signs that the unit has been tampered with. Units should be returned to the Quality Manager, at the address shown below. A note giving details of the failure and the conditions prevailing at the time should accompany the unit. Receipt of the unit will be acknowledged and the Company will endeavour to respond within 10 working days. This warranty does not apply if the shock has been used for competition purposes. Gaz Shocks are dedicated to producing Shock Absorbers and Struts that satisfy the exacting requirements of our customers. As part of our Quality System, we are committed to a quality improvement programme and we regard the feedback of our customers as an essential part of this process.

WARNING Do not over-tighten base control knob in either direction, as this will result in locking the adjustment on the complete assembly.
