# PORTERFIELD CARBON KEVLAR RACING BRAKE PAD COMPOUNDS

Quality Performance Products

**R-4** - Designed specifically for heavy duty motorsports, the R-4 brake pad was our first and is our original Carbon Kevlar brake pad. Being able to maintain an average of .50 friction level within a very wide temperature range gives the R-4 pad astounding versatility and makes it very suitable for a wide array of various track conditions. Another inherent characteristic of our Carbon Kevlar material is how quickly the pads warm up to race temperature which is quite helpful during restarts, and when track time is limited. Optimum R-4 operating temperatures are 450°F and above. When used with cast iron and steel alloy rotor, the R-4 compound requires minimal bed-in period.

**R4-E** - A Carbon Kevlar compound made to last a bit longer than the original R-4 compound. Porterfield's R4-E pads have an average friction level of .460 and perform best at temperatures averaging over 600°F. The R4-E compound is designed to endure higher prolonged temperatures and still have pad life as long or longer than Porterfield R-4. This pad is great for club enduro events and applications where temperatures are at their maximum.

**R4-1** -Developed and tested in the vintage racing community the R4-1 gives an average friction level of .56 with peak levels up to .600. Having tremendous stopping power, the R4-1 pad material can reach upward of .5 friction level when pad temperature is a very low 200°F. Drivers can still have a high friction brake pad without the worry of the pad becoming too cold to be effective when the car is driven only moderately. For use when pad temperatures are under 600°F and peak temperatures are not over 1000°F. Widely used on Vintage GT and formula cars the R4-1 has gained great popularity as an excellent auto-cross, off-road and rally-cross pad material.

## CUSTOM BRAKE PADS

From the very early days of Porterfield brakes, our in-house custom manufacturing has given us the capability to create brake pads in a variety of shapes and thickness to your specifications.

If you need a brake pad identified you can fax an outline of the pad. Please include an overall length measurement and a height as shown in the sample image. We will identify it and call you back.

# PORTERFIELD CARBON KEVLAR RACING BRAKE SHOES

Quality Performance Products

Our racing brake shoes are high-temperature bonded, then arched to drum specifications and finally copper riveted to the brake shoe core to ensure the strongest material adhesion (the rivets can be left out if requested). These brake shoes will withstand the most rigorous racing conditions with consistent and powerful stopping performance.

## R-4 Original Racing Compound

Our original R-4 racing brake shoe material manufactured by Porterfield for over a decade, remains to be one of the finest brake shoes produced. They have high overall friction, warm up quick and are drum friendly. The R-4 is able to operate under the most severe and extreme braking conditions. High temp bonded and riveted onto your cores or ours, it is our longest lasting race shoe material. A proven winning material suitable for most all forms of autoracing.

## RD-4 Compound

The RD-4 brake shoe material is our newest addition to our line of high performance brake shoe lining. This material incorporates the latest in brake shoe material development and is suitable for all types of racing. This racing shoe material has more overall friction with a much higher initial bite at lower temperatures. The RD-4 remains very drum friendly while being able to withstand the severe use under competition. Suitable for lightweight racecars, improved touring and vintage racecars the RD-4 is an excellent all purpose competition racing shoe compound.

## R-4 Woven Kevlar

Our Woven Kevlar is a high friction woven composite material designed for use in mechanically actuated drum brake systems. It has very high friction at ambient and low temperatures for good initial bite and may be bonded to aluminum or steel brake shoe cores. Trusted by top car mechanics to stop the most valuable of vintage vehicles safely, without any unnecessary drum wear. This material is widely used in vintage racing and vintage touring events on vehicles with mechanical drum brakes.

**\*\*\*For rare vintage and other odd applications customer may be required to furnish brake shoe cores. We are able to reline virtually any type of brake shoe. When ordering please specify a drum diameter for arching purposes.\*\*\***

### \*\*NOTE\*\*

Due to size constraints, the applications listed represent an overview of the competition vehicles and some passenger vehicles. If your vehicle or caliper type is not listed, please call for additional information.

Prices shown are for the Porterfield full race compound lineup which includes the R-4, R4-E, and the R4-1.

We carry brake pads for practically any vehicle, trucks, and commercial applications.

### CUSTOM BRAKE PADS

If you need a brake pad identified you can fax an outline of the pad to (03) 9899 3895 and we will identify it and you back with the details.

When sending over the outline remember to include length and height measurements and for racing calipers provide thickness as well. Pad thickness is including the steel backing plate. We can usually make pads to desired thickness upon request.

# PORTERFIELD CARBON KEVLAR HIGH PERFORMANCE STREET BRAKE COMPOUND

## R4-S

### BRAKE PAD

For high performance and heavy duty street conditions the Porterfield R4-S compound remains a top performer in the realm of street/performance brake pads. With the R4-S compound giving more friction level (up to .41) than OEM pads. This is an amazingly fast stopping brake pad. Simply put, they will give you an impressive increase in stopping ability with very minimum amount of pedal effort. Perfect for prolonged everyday street driving while also being capable of enduring the most severe use without fade. It is also rotor friendly of course.

We have gone to great measures to ensure that the R4-S compound has the absolute lowest noise and dust levels possible, far below O.E.M. equipment or any other high performance brake material available. The R4-S compound which has an overall win in the Baja 1000 is available for most models of cars, trucks, SUV's, and aftermarket racing calipers. Superb stopping power under heavy use, great for an occasional autocross, solo event, off road event or rallies. Perhaps one of the best overall performing, clean, and quiet everyday high performance driving brake pad ever made.

### BRAKE SHOES

The R4-S shoe is designed for vehicles ranging from large SUV's, tow vehicles, and commercial vehicles. It stands out in a vast array of uses as a reliable high friction longer lasting brake shoe. For trucks, a shoe that adds a substantial increase in rear axle stopping power at all temperatures. On your daily driven road car it will provide both longer shoe and pad life.

## HIGH PERFORMANCE ROTORS

- \* O.E.M. Spec Size
- \* Import and Domestic
- \* Available for all applications

© Copyright

**Cross Drilling** of rotors is designed for use on high performance vehicles. They are also extremely effective for practical street applications. Cross Drilling assists cooling of rotor and also lets gas build-up between pad and rotor escape. Using these rotors may actually enhance braking in wet conditions.

**Slotting** rotors helps release gases that build-up between the pad and rotor surface. Unlike cross drilling it does not lessen the surface area of the rotor as drastically.

**Cryogenically Treating** returns the metal to its relaxed state by stress relieving and stabilizing the metal making it durable and less susceptible to microcracking. The rotors are taken down to -300°F for over 72 hours. This results in fine carbides, resultant particles, and tight lattice structures are precipitated from cryogenic treatment. These particles are responsible for the exceptional wear characteristics imparted to materials by the process, due to a denser structure and the resulting larger surface area content, heat, and wear.
